How to use the flat rate time (F.R.T.)

This F.R.T. (Flat Rate Time) is used to determine the standard labor time allowed for replacement of parts covered by the warranty during the period the warranty is in effect. The F.R.T. for those parts which are not listed herein should be determined from the operation closely related to the replacement of that part.

1. The F.R.T. is based on the following servicing conditions

- a. A liberal allowance is added to the net servicing time.
- b. Standard times specified are based on the condition that the necessary servicing tools listed in the service manual which describes the Honda service policy are available close at hand and the work performed by a mechanic with normal skill.
- c. Time required for inspection and operational test following the servicing is included in the F.R.T.

2. Method of computing

The job times are listed in tenth of an hour to simplify computation.

(Example) 0.3 = 18 minutes
5.6 = 5 hours and 36 minutes

| CONVERSION CHART | | | |
|------------------|---------|-------|---------|
| Hours | Minutes | Hours | Minutes |
| 0.1 | 6 | 0.6 | 36 |
| 0.2 | 12 | 0.7 | 42 |
| 0.3 | 18 | 0.8 | 48 |
| 0.4 | 24 | 0.9 | 54 |
| 0.5 | 30 | 1.0 | 60 |

The F.R.T. shown with (*) includes engine removal and installation. The parts, having the same number of man-hour, are identified by a mark "*", and classified under the title of their representative work.

* If the number of right wheel and left wheel mounting/dismounting operations are equal, the standard work time for the right wheel is indicated.

3. Computing the F.R.T.

When several jobs are performed at the same time, make the calculation in the following manner.

a. Jobs of non duplicated nature

The F.R.T. for the job is obtained by totalling the F.R.T. for each part replaced.

(Example) Replacement of cylinder head and starter motor.

| Service item | F.R.T. |
|---------------|--------|
| Cylinderhead | 7.3 |
| Starter motor | 0.6 |

The F.R.T. for the job is: $7.3 + 0.6 = 7.9$

b. Jobs of duplicated nature

Take the F.R.T. for the last part to be replaced.

(Example) Replacement of timing belt and crankshaft.

| Service item | F.R.T. |
|--------------|--------|
| Timing belt | 2.1 |
| Crankshaft | *12.0 |

The F.R.T. for the job is: *12.0

c. Jobs of partially related nature

Total up the F.R.T. for all of the parts replaced and then subtract the F.R.T. for the duplicated operation.

(Example) Replacement of crankshaft and mainshaft.

| Service item | F.R.T. |
|---------------------------------------|--------|
| Crankshaft | *12.0 |
| Mainshaft | 4.8 |
| Transmission removal and installation | 3.6 |

The F.R.T. for the job is: $(*12.0 + 4.8) - 3.6 = *13.2$

Transmission removal and installation is the duplicated operations.

d. Work not listed

1. Special thrust washer
(Example)

| Service item | F.R.T. |
|---|--------|
| Mainshaft, countershaft and related parts | 4.8 |

Use the F.R.T. for the part to which it belongs.

2. Rear wheel cylinder piston cup

| Service item | F.R.T. |
|--|--------|
| Rear wheel cylinder assembly and related parts | 1.0 |

Use the F.R.T. for the part to which it belongs.

4. Air Conditioner Equipped Vehicles

1. For servicing vehicles equipped with an air conditioner, the refrigerant must be discharged for the replacement of those parts indicated by (#) in the F.R.T. column.

In addition, the cost of the refrigerant required to recharge the cooling system should be included when figuring the service charge.

2. When performing two un related jobs indicated by (#) at the same time, total the F.R.T. for the jobs and then subtract duplicated F.R.T. 1.0 (refrigerant charging time)

(Example)

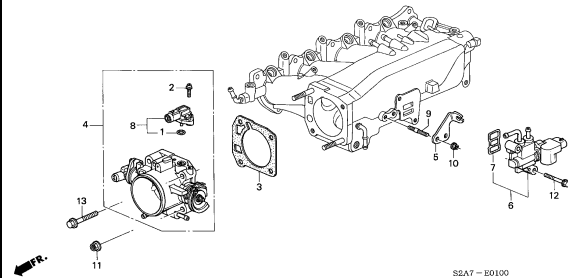

| | |
|---------------------|---------------------------|
| | F.R.T |
| Compressor assembly | # 2.1 |
| Condenser assembly | + # 1.5 |
| | <u>- 1.0</u> |
| | 2.6 + Cost of refrigerant |

Total charge is the labor charge corresponding to 2.6 hours plus the cost of the refrigerant.
